

# Pup Joints

The pup joint is a straight pipe with special connection forms at both ends: thread, flange, union, etc., which is widely used in oil drilling, cementing and fracturing, and testing operations. Various types of pup joints can be provided for use in ordinary, low temperature environments or other situations. We can customize our products to special purpose and sizes.

## Features

- Nominal Size: 2" ~ 4"
- Temperature Rating: -29~121℃ (PU)
- Service: Standard, Sour gas
